

New Website to Provide Solutions for Your Oral Solid Dose Formulation Needs

Asahi Kasei is delighted to announce the launch of our new website. Our new website will provide more intuitive and user-friendly experience to our existing and prospective customer.

Make The Smart Choice

Asahi Kasei MCC products bring a key difference compared with standard MCC products: their high performance stemming from innovative particle morphology.

Why are Asahi Kasei MCCs **The Smart Choice**?

Facilitating formulations	The base for quality	Production efficiency
Our MCC products facilitate challenging formulations, solve tableting issues and enable unique and patient-friendly dosage forms.	Less black particles, less impurities and high-quality consistency of our MCC products directly contribute to the quality improvement of your formulations.	Our MCC products contribute to your production efficiency by enabling high-speed tableting and reducing production problems.

Over last 50+ years, Asahi Kasei has been leading manufacturer and supplier of the microcrystalline products for the Japanese market and around the world. Our pharmaceutical grade MCC products are manufactured at two dedicated sites in Japan by following GMP practices. These sites guarantee premium product quality, batch to batch uniformity and supply chain consistency for our customers.

We offer two types of MCC products, Ceolus™ and Celphere™. Unique and fibrous morphology of Ceolus™ MCC particles enable high binding performance to address many tableting challenges. Celphere™ offers uniform and strong MCC spheres that serve as seed core for the extended and sustained release multi-particulate dosage forms.

CEOLUS™
Just Pure Performance

CELPHERE™
Reliability At The Core

Our new website will provide technical information that can assist you to facilitate development of challenging formulations, solve tableting issues and enable unique and patient-friendly dosage forms. Access to our website to get the helpful information!
