and reliable

BIOGRUND – Our business

BIOGRUND assists the pharmaceutical and related industries in the development and production of solid oral dosage forms. We help our customers improve running production processes and cooperate with them in the research for new solutions.

FILMCOATING EXCELLENCE is **BIOGRUND's** core business. Our unique and ready-to-use film coating, sugar-coating, colouring, tableting and excipient products guarantee optimized results in a short time. Colour matching and customizing the formulation to your specific tablet core is our daily business. Furthermore, our product development benefits from the expertise we have gained in over 15 years of experience.

BIOGRUND owns modern, state-of-the-art production facilities in Germany and the US. Our well equipped laboratories for development and quality control and a technical coating lab guarantee a fast reaction to the needs and wishes of our customers, with whom we develop a relationship of mutual trust and respect. It is essential for us to efficiently fulfil customer requirements and thus contribute to our customers' success.

BIOGRUND – Choose your specialist

We supply products and provide services for the pharmaceutical industry and manufacturers of nutritional and dietary supplements. Because of the unique formulations of our products, they can be used in a simple and easy way.

Ready-to-use film coating applications are our core specialty, and we offer our customers a choice from the broadest range of polymers. The rapid reconstitution of our coating products allows fast application and a simplification of the production process. The products can be used on tablets, granules, pellets and capsules.

Our sugar-coating products simplify and accelerate the sugar-coating process by shorter drying times. Our innovative products for tableting reduce production time and give excellent compaction properties. The free

flowing binders can be used for adjusting retard release formulations. Colouring is the fourth business area in which we specialize. The deagglomerated and homogeneous powder compounds, liquid dispersions or printing inks always provide reproducible results and give your product a unique appearance. As a result, efficiency and flexibility will improve your day-to-day production.

BIOGRUND GmbH was founded in 1999 as a company for manufacturing and marketing excipients and other auxiliary materials for the food, nutritional supplement, cosmetic and pharmaceutical industries. Right from the start, the aim of our managing policy was to develop our company to a healthy and efficient enterprise. Since then we have established a substantial market share within our areas of interest.

Over the years we have developed durable business relations to our customers and suppliers, to universities, laboratories and contract manufacturers. By a reasonable price strategy, good cooperation, highest quality and best service we have achieved continuous business growth. This gives us the opportunity to remain independent in our decisions and not to rely too heavily on one supplier or one customer. The most important asset of our business development is to have satisfied customers.

We share our partners' values and aims and support them in their needs, and it is our ambition to supply products and services of the highest quality to our business partners throughout the world.

Being innovative is a challenge. We are continuously developing cutting edge formulations for the manufacturing of our products and the constant improvement of our management system guarantees the highest quality. The success of our business has resulted in the growth of our company and has enabled us to provide new jobs and, by offering apprenticeships, invest in the training of young people.

We make sure that our customers receive superior value, our business partners and employees take part in our success, and our shareholders receive a continuous and above average return of investment.

BIOGRUND – Philosophy

Our guiding principle is to provide products and processes that are always “easy, fast & reliable”. This is especially true for our ready-to-use products, which can minimize and simplify working time for all applications.

BIOGRUND only uses raw materials of highest and consistent quality to meet the official regulatory requirements of the user’s country for pharmaceutical products and nutritional or dietary supplements. Producers of pharmaceutical products and nutritional and functional food appreciate our experience and expertise, our excellent service and the high quality standard of our products.

Environmental Policy

Being aware of our environment and acting in a legally compliant way is a substantial factor of our business culture and thus an integral part of our management decisions. Our understanding of social responsibility is not only to secure the supply of our customers, but to do this in a sustainable manner, which considers economic, ecological and social questions to an equal extent. This requires efficient and careful handling of all natural resources.

All providers play their part in making sure that **BIOGRUND** products do not endanger humans or the environment. Suggestions made by providers and employees as well as their concerns about environmentally relevant topics are examined by the management and flow into the planning of business activities.

Right from the start of the development phase of a product, a careful selection of the raw materials and packing materials ensures that the products cause the least possible environmental impact. Additionally, an optimal production planning and process control keeps environmental safety to the maximum.

Good Reasons

- 1 Experience, Trustworthiness, Fast Service, Quality Management, Flexibility, Up-Scaling, Coating Specialists, Application Technology, Development, Production, Optimizing, Documentation, High Quality, Innovation, Assistance, Contract Manufacturing, Global Distribution
- 2 EXCiPACT™ Certification
- 3 ISO 9001 and ISO 14001 Certification
- 4 Production and contract manufacturing of homogeneous powder mixtures and millings, in particular with low-dose components
- 5 High quality homogeneous powder mixtures and millings for film coating and pigmentation
- 6 Assistance in development, optimization, production and documentation
- 7 Technical assistance and service by experienced coating specialists
- 8 Excellent and rapid service to the overall benefit of our customers
